1. Introduction

1.1 Product Description
Canadian Solar three phase inverters integrate DRM and backflow power control function, that could suitable for smart grid requirement.
This manual covers the three phase inverter model listed below:
CSI-12K-T400GL01-E, CSI-15K-T400GL01-E, CSI-17K-T400GL01-E,
CSI-20K-T400GL01-E

1.2 Packaging
When you receive the inverter, please ensure that all the parts listed below are included:
- Inverter x1
- Back plate x1
- Fastening screw x2
- DC connector x4
- AC connector x1
- RJ 45 connector x1 (For UK and Belgium)
- WiFi/GPRS Stick x1 (optional)
- User manual x1

If anything is missing, please contact your local Canadian Solar distributor.
2. Safety Instructions

2.1 Safety Symbols

Safety symbols used in this manual, which highlight potential safety risks and important safety information, are listed as follows:

**WARNING:**
WARNING symbol indicates important safety instructions, which if not correctly followed, could result in serious injury or death.

**NOTE:**
NOTE symbol indicates important safety instructions, which if not correctly followed, could result in some damage or the destruction of the inverter.

**CAUTION:**
CAUTION, RISK OF ELECTRIC SHOCK symbol indicates important safety instructions, which if not correctly followed, could result in electric shock.

**CAUTION:**
CAUTION, HOT SURFACE symbol indicates safety instructions, which if not correctly followed, could result in burns.

**CAUTION:**
The PV array (Solar panels) supplies a DC voltage when they are exposed to sunlight.

**CAUTION:**
Risk of electric shock from energy stored in capacitors of the Inverter.
Do not remove cover for 5 minutes after disconnecting all power sources (service technician only). Warranty may be voided if the cover is removed without unauthorized.

**CAUTION:**
The surface temperature of the inverter can exceed 75°C (167°F).
To avoid risk of burns, DO NOT touch the surface when inverter is operating. The inverter must be installed out of reach of children.

**WARNING:**
Electrical installations must be done in accordance with the local and national electrical safety standards.

**WARNING:**
Please do not connect PV array positive(+) or negative(-) to ground, it could cause serious damage to the inverter.

**WARNING:**
All photovoltaic source and output circuit conductors shall have disconnects that comply with the NEC Article 690, Part II. All Canadian Solar three phase inverters feature an integrated DC switch.

**CAUTION:**
Risk of electric shock. Do not remove cover. There is no user serviceable parts inside. Refer servicing to qualified and accredited service technicians.

2.2 General Safety Instructions

**WARNING:**
Please do not connect PV array positive(+) or negative(-) to ground, it could cause serious damage to the inverter.

**WARNING:**
Electrical installations must be done in accordance with the local and national electrical safety standards.

**WARNING:**
To reduce the risk of fire, over-current protective devices (OCPD) are required for circuits connected to the Inverter.
The DC OCPD shall be installed per local requirements. All photovoltaic source and output circuit conductors shall have disconnects that comply with the NEC Article 690, Part II. All Canadian Solar three phase inverters feature an integrated DC switch.

**CAUTION:**
Risk of electric shock. Do not remove cover. There is no user serviceable parts inside. Refer servicing to qualified and accredited service technicians.

2.3 Notice For Use

The inverter has been constructed according to the applicable safety and technical guidelines. Use the inverter in installations that meet the following specifications only:

1. Permanent installation is required.
2. The electrical installation must meet all the applicable regulations and standards.
3. The inverter must be installed according to the instructions stated in this manual.
4. The inverter must be installed according to the correct technical specifications.
5. To startup the inverter, the Grid Supply Main Switch (AC) must be switched on, before the solar panel's DC isolator shall be switched on. To stop the inverter, the Grid Supply Main Switch (AC) must be switched off before the solar panel's DC isolator shall be switched off.
3. Overview

3.1 Front Panel Display

</tr>
</tbody>
</table>

Table 3.1 Status Indicator Lights

3.3 Keypad

There are four keys in the front panel of the Inverter (from left to right): ESC, UP, DOWN, and ENTER keys. The keypad is used for:
- Scrolling through the displayed options (the UP and DOWN keys);
- Access to modify the adjustable settings (the ESC and ENTER keys).

3.4 LCD

The two-line Liquid Crystal Display (LCD) is located on the front panel of the Inverter, which shows the following information:
- Inverter operation status and data;
- Service messages for operator;
- Alarm messages and fault indications.

4. Product handling and storage

4.1 Product handling

Please review the instruction below for handling the inverter:

1. The red circles below denote cutouts on the product package.
   Push in the cutouts to form handles for moving the inverter (see Figure 4.1).

![Move the Inverter](image)

2. Open the carton, then handle both sides of inverter through the area denoted dotted line. (see figure 4.2).

![Inverter Handles](image)
4. Product handling and storage

4.2 Product Storage

If the inverter is not to be installed immediately, storage instructions and environmental conditions are below:

- Use the original box to repackage the inverter, seal with adhesive tape with the desiccant inside the box.
- Store the inverter(s) in a clean and dry place, free of dust and dirt.
- Storage temperature must be between -40°C and 70°C and the humidity should be between 0 and 100% non-condensing.
- Stack no more than three (3) inverters high.
- Keep box(es) away from corrosive materials to avoid damage to the inverter enclosure.
- Inspect packaging regularly. If packaging is damaged (wet, pest damage, etc), repackage the inverter immediately.
- Store the inverter(s) on a flat, hard surface - not inclined or upside down.
- After long-term storage, the inverter needs to be fully examined and tested by qualified service or technical personnel before using.
- Restarting after a long period of non-use requires the equipment to be inspected and, in some cases, the removal of oxidation and dust that has settled inside the equipment will be required.

5. Installation

5.1 Select a Location for the Inverter

To select a location for the inverter, the following criteria should be considered:

- Do not install in small closed spaces where air can not circulate freely. To avoid overheating, always make sure the flow of air around the inverter is not blocked.
- Exposure to direct sunlight will increase the operational temperature of the inverter and may cause output power limiting. Canadian Solar recommends inverter installed to avoid direct sunlight or raining.
- To avoid over heating ambient air temperature must be considered when choosing the inverter installation location. Canadian Solar recommends using a sun shade minimizing direct sunlight when the ambient air temperature around the unit exceeds 104°F/40°C.

WARNING: Risk of fire

Despite careful construction, electrical devices can cause fires.
- Do not install the inverter in areas containing highly flammable materials or gases.
- Do not install the inverter in potentially explosive atmospheres.

NOTE:

Nothing should be stored on or placed against the inverter.
5. Installation

5.2 Mounting the Inverter

- The visibility of LED status indicator lights and LCD should be considered.
- Install vertically (+/- 5°) or tilted backward (<=15°).
- Don't mount inverter on the tilted forward wall.
- Don't mount inverter on the horizontal.

Dimensions of mounting bracket:

Refer to figure 5.4 and figure 5.5. Inverter shall be mounted vertically. The steps to mount the inverter are listed below.

1. Refer to Figure 5.4, the holes for expansion bolt based on the hole diameter of bracket (ST6.3*60 cross recessed hexagon head tapping screws, Hj 0108 10*50mm fished expandable tubular), using the percussion drilling with the 10mm drill need to stay vertically on the wall. And the drill hole must be vertically on the wall. And all drill holes' depth is 60mm.

2. Make sure the bracket is horizontal. And the mounting holes (in Figure 5.4) are marked correctly. Drill the holes into wall at your marks. And all drill holes' depth is 60mm.

3. Use the suitable expansion screws to fix the bracket on the wall.

Temperature of inverter heat sinker might 167°F/75°C.
Inverter is designed for working extreme environment, operation temperature range:
-15°C~149°F/25°C~65°C.

When 1 or more inverters are installed in one location, a minimum 500mm clearance should be kept between each inverter or other object. The bottom of the inverter should be 500mm clearance to the ground.
5. Installation

**WARNING:**
The inverter must be mounted vertically.

4. Lift the inverter and hang it on the bracket, and fixing both sides of inverter with locking screws (accessories).

5. Anti-theft lock mount (optional)
   Anti-theft lock (User-supplied) function is that inverter is fixed in bracket in case theft. The lock is selected by 5mm (the keyhole diameter), and the lock of stainless steel is preferred.

5.3 Electrical Connections
Inverter designs quick-connect terminal, so top cover needn't open during electrical connection. The sign meaning located the bottom of inverter, as shown below in table 5.1. All electrical connections are suit for the local or national standard.

| ) | Positive DC input terminal |
| + | Negative DC input terminal |
| BA / | DC input terminal |
| BA 0 | DC input terminal |
| BA QU GR AF | Switch of DC input terminals |
| AMK | RJ 45 and terminal block for RS485 communication port |
| E P OB | Connecting terminal of the Grid |

Table 5.1 Electrical connection symbols

The electrical connection of the inverter must follow the steps listed below:
1. Switch the Grid Supply Main Switch (AC) OFF.
2. Switch the DC Isolator OFF.
3. Assemble PV input connector to the Inverter.
5. Installation

5.3.1 Grounding

Canadian Solar recommends 2 ground protection methods: Through grid terminal connection and external heat sink connection.

If AC terminal is used to connect ground, please refer to the contents of 5.3.3.

If the heat sink is used to connect the ground, please follow the steps below:

1) Prepare the grounding cable: recommend to use the ≥ 6mm² outdoor copper-core cable.

2) Prepare OT terminals: M6.

3) Strip the ground cable insulation to a suitable length (see Figure 5.8).

4) Insert the stripped wire into the OT terminal crimping area and use the hydraulic clamp to crimp the terminal to the wire (see Figure 5.9).

5) Remove the screw from the heat sink ground point.

6) Connect the grounding cable to the grounding point on the heat sink, and tighten the grounding screw, Torque is 3Nm (see Figure 5.10).

**Important:**

For multiple inverters in parallel, all inverters should be connected to the same ground point to eliminate the possibility of a voltage potential existing between inverter grounds.

**Important:**

B (insulation stripping length) is 2mm~3mm longer than A (OT cable terminal crimping area) 2mm~3mm.

**Important:**

For improving anti-corrosion performance, after ground cable installed, apply silicone or paint is preferred to protect.
5. Installation

5.3.2 Connect PV side of inverter

Before connecting inverter, please make sure the PV array open circuit voltage is within the limit of the inverter.

Before connection, please make sure the polarity of the output voltage of PV array matches the DC+ and DC- symbols.

Before connecting inverter, please make sure the PV array open circuit voltage is within the limit of the inverter.

![Figure 5.11 DC+ Connector](image1)

![Figure 5.12 DC- Connector](image2)

Please use approved DC cable for PV system.

<table>

<tr>
<td>Industry generic PV cable</td>
<td>7B ± 9B</td>
<td></td>
<td>4.5e-4.3DZ J</td>
<td>7B ± 45DZ J</td>
</tr>
</tbody>
</table>

The steps to assemble the DC connectors are listed as follows:

1. Strip off the DC wire for about 7mm, Disassemble the connector cap nut. (see Figure 5.13)
2. Insert the wire into the connector cap nut and contact pin. (see Figure 5.14)
3. Crimp the contact pin to the wire using a proper wire crimper. (see Figure 5.15)
4. Insert metal connector into top of connector, and tighten nut with torque 2.5-3 Nm (see figure 5.16).

![Figure 5.13 Disassemble the Connector Cap nut](image3)

![Figure 5.14 Insert the Wire into the Connector Cap nut and contact pin](image4)

![Figure 5.15 Crimp the contact pin to the wire](image5)

![Figure 5.16 Connector with Cap nut Screeded on](image6)

![Figure 5.17 Multimeter measurement](image7)

![Figure 5.18 Connect the DC Connectors to the Inverter](image8)

5. Measure PV voltage of DC input with multimeter, verify DC input cable polar (see figure 5.17), and ensure each string of PV voltage in range of inverter operation. Connect DC connector with inverter until hearing a slight clicking sound indicates connection succeed. (see figure 5.18)

Caution:
If DC inputs are accidently reversely connected or inverter is faulty or not working properly, it is NOT allowed to turn off the DC switch as it will damage the inverter and even leads to a fire disaster.

The correct actions are:

* Use a clip-on ammeter to measure the DC string current.
* If it is above 0.5A, please wait for the solar irradiance reduces until the current decreases to below 0.5A.
* Only if the current is below 0.5A, you are allowed to turn off the DC switches and disconnect the PV strings.

Please note that any damages due to wrong operations are not covered in the device warranty.
5. Installation

5.3.3 Connect grid side of inverter

For all AC connections, 6-16mm², YJV-0.6/1KV cable is required to be used. Please make sure the resistance of cable is lower than 1.50ohm. If the wire is longer than 20m, preferred to 10-16mm² cable.

Internal of AC connector signs “L1”, “L2”, “L3”, “N” and “PE” five connection ports (see Figure 5.21). Three live wires are connected the “L1”, “L2” and “L3” terminals respectively; ground wire connects “PE”; neutral wire connects “N” terminal:

<table>
<thead>

</tbody>
</table>

The combination of AC connectors has two seal rings, please refer to different diameters of cable select corresponding seal ring.

B) Clip plastic fixture (Auxiliary tighten) in socket element, tighten adapter in socket element, then tighten swivel nut with 3-4Nm torque (see figure 5.23).

C) Connect AC connector with inverter, then tighten AC connector for clockwise (see figure 5.24), until hearing a slight clicking sound indicates connection succeed.

The steps of AC grid terminal connector for install as follows:
A) Stripped the insulation sleeve of cable for 70mm, so that bared copper-cored connector reaches for 9mm. Cable through nut and sleeve of socket element, insert corresponding terminals and tighten with allen wrench (see figure 5.22).

B) Clip plastic fixture (Auxiliary tighten) in socket element, tighten adapter in socket element, then tighten swivel nut with 3-4Nm torque (see figure 5.23).

C) Connect AC connector with inverter, then tighten AC connector for clockwise (see figure 5.24), until hearing a slight clicking sound indicates connection succeed.
5. Installation

5.3.4 Max. over current protection device (OCPD)

To protect the inverter’s AC grid connection conductors, Canadian Solar recommends installing breakers that will protect against overcurrent. The following table defines OCPD ratings for the Canadian Solar 12-20kW three phase inverters.

<table>

Table 5.2 Rating of grid OCPD

5.3.5 Inverter monitoring connection

The inverter can be monitored via Wi-Fi or GPRS. All Canadian Solar communication devices are optional (Figure 5.25). For connection instructions, please refer to the Canadian Solar Monitoring Device installation manuals.

5.3.6 Meter Connection (optional)

The inverter has integrated export limitation functionality. To use this function, a power meter must be installed, it should be installed in the load side or in the grid side, see Figure 5.26 and Figure 5.27. After the inverter power on, please set the corresponding configuration as sections 7.5.11.1.2 and 7.5.11.1.3. The meter is optional. There are 2 choices, one meter (choice 1) without CT, and the other meter (choice 2) with CT; customers can choose according to different applications and requirements.

Choice 1:

Choice 2:
5. Installation

5.3.7 Logic interface connection (For UK and Belgium)

Logic interface is required by Logic interface is required by local regulations in UK and Belgium that can be operated by a simple switch or contactor. When the switch is closed the inverter can operated normally. When the switch is opened, the inverter will reduce its output power to zero within 5s. Pin5 and Pin6 of RJ45 terminal is used for the logic interface connection.

Please follow below steps to assemble RJ45 connector.
1. Insert the network cable into the communication connection terminal of RJ45.
   (As shown in figure 5.28)

2. Use the network wire stripper to strip the insulation layer of the communication cable. According to the standard line sequence of figure 5.29 connect the wire to the plug of RJ45, and then use a network cable crimping tool to make it tight.

3. Connect RJ45 to DRM (logic interface).
   After wire connection, please refer chapter 7.5.8.1 to enable the logic interface function.

6. Start & Stop

6.1 Start the Inverter

To start up the Inverter, it is important that the following steps are strictly followed:

1. Switch the grid supply main Switch (AC) ON first.
2. Switch the DC switch ON. If the voltage of PV arrays are higher than start up voltage, the inverter will turn on. The red LED power will light.
3. When both the DC and the AC sides supply to the inverter, it will be ready to generate power. Initially, the inverter will check both its internal parameters and the parameters of the AC grid, to ensure that they are within the acceptable limits. At the same time, the green LED will flash and the LCD displays the information of INITIALIZING.
4. After 30-300 seconds (depending on local requirement), the inverter will start to generate power. The green LED will be on continually and the LCD displays GENERATING.

WARNING:
Do not touch the surface when the inverter is operating. It may be hot and cause burns.

6.2 Stop the Inverter

To stop the Inverter, the following steps must be strictly followed:

1. Turn off the ac switch.
2. Put the DC SWITCH on the inverter in the position of "OFF".
3. Remove the positive and negative dc lines and remove the ac lines.
In normal operation, LCD screen alternatively shows inverter power and operation status (see Figure 7.1). The screen can be scrolled manually by pressing the UP/DOWN keys. Pressing the ENTER key gives access to Main Menu.

7.1 Main Menu
There are four submenus in the Main Menu (see Figure 7.1):
1. Information
2. Settings
3. Advanced Info.
4. Advanced Settings

7.2 Information
The Canadian Solar three Phase Inverter main menu provides access to operational data and information. The information is displayed by selecting "Information" from the menu and then by scrolling up or down.

### 7.2.1 Lock screen
Pressing the ESC key returns to the Main Menu. Pressing the ENTER key locks (Figure 7.2(a)) or unlocks (Figure 7.2(b)) the screen.

Figure 7.1 Operation Overview

Figure 7.2 Locks and Unlocks the Screen of LCD
7. Operation

7.3 Settings
The following submenus are displayed when the Settings menu is selected:
   1. Set Time
   2. Set Address

7.3.1 Set Time
This function allows time and date setting. When this function is selected, the LCD will display a screen as shown in Figure 7.3.

```
NEXT=<ENT> OK=<ESC>
01-01-2016 16:37
```

Figure 7.3 Set Time

Press the UP/DOWN keys to set time and date. Press the ENTER key to move from one digit to the next (from left to right). Press the ESC key to save the settings and return to the previous menu.

7.3.2 Set Address
This function is used to set the address when multi inverters are connected to three monitor. The address number can be assigned from 01 to 99 (see Figure 7.4). The default address number of Canadian Solar Three Phase Inverter is 01.

```
YES=<ENT> NO=<ESC>
Set Address: 01
```

Figure 7.4 Set Address

Press the UP/DOWN keys to set the address. Press the ENTER key to save the settings. Press the ESC key to cancel the change and return to the previous menu.

7.4 Advanced Info - Technicians Only

**NOTE:**
To access to this area is for fully qualified and accredited technicians only. Enter menu “Advanced Info.” and “Advanced settings” (need password).

Select “Advanced Info.” from the Main Menu. The screen will require the password as below:

```
YES=<ENT> NO=<ESC>
Password:0000
```

Figure 7.5 Enter password

After enter the correct password the Main Menu will display a screen and be able to access to the following information.

The screen can be scrolled manually by pressing the UP/DOWN keys. Pressing the ENTER key gives access to a submenu. Press the ESC key to return to the Main Menu.

7.4.1 Alarm Message
The display shows the 100 latest alarm messages (see Figure 7.6). Screens can be scrolled manually by pressing the UP/DOWN keys. Press the ESC key to return to the previous menu.

```
Alarm001: OV-G-V
Time: 27-11 Data: 7171
```

Figure 7.6 Alarm Message

7.4.2 Running Message
This function is for maintenance person to get running message such as internal temperature, Standard No.1,2, etc.

Screens can be scrolled manually by pressing the UP/DOWN keys.

7.4.3 Version
The screen shows the model version and the software version of the Inverter (see Figure 7.7).

```
Model: 08
Software Version: D20001
```

7.4.5 Monthly Energy
The function is for checking the energy generation for selected month.

Press DOWN key to move the cursor to day and month, press UP key to change the digit. Press Enter after the date is fixed.

Press UP/DOWN key to move one date from another.

2015-02: 0510kWh
2015-01: 0610kWh

Figure 7.11 Month energy

7.4.6 Yearly Energy
The function is for checking the energy generation for selected year.

Press DOWN key to move the cursor to day and year, press UP key to change the digit. Press Enter after the date is fixed.

Press UP/DOWN key to move one date from another.

2015: 0017513kWh
2014: 0165879kWh

Figure 7.13 Yearly energy

7.4.7 Daily record
The screen shows history of changing settings. Only for maintance personnel.

7.4.8 Communication Data
The screen shows the internal data of the Inverter (see Figure 7.14), which is for service technicians only.

01-05: 01 25 E4 9D AA
06-10: C2 B5 E4 9D 55

Figure 7.14 Communication Data

7.4.9 Warning Message
The display shows the 100 latest warn messages (see Figure 7.15). Screens can be scrolled manually by pressing the UP/DOWN keys. Press the ESC key to return to the previous menu.

Msg000:
T: 00-00 00:00 D: 0000

Figure 7.15 Warning Message
7. Operation

7.5 Advanced Settings - Technicians Only

NOTE:
To access to this area is for fully qualified and accredited technicians only. Please follow 7.4 to enter password to access this menu.

Select Advanced Settings from the Main Menu to access the following options:

7.5.1 Selecting Standard
This function is used to select the grid’s reference standard (see Figure 7.16).

![Figure 7.16]

Press the UP/DOWN keys to select the standard (G59/3, UL-480V, MEX-CFE, C10/11 and “User-Def” function).
Press the ENTER key to confirm the setting.
Press the ESC key to cancel changes and returns to previous menu.

7.5.2 Grid ON/OFF
This function is used to start up or stop the power generation of Canadian Solar Three Phase Inverter (see Figure 7.18).

![Figure 7.18 Set Grid ON/OFF]

Press the UP/DOWN keys to scroll through items. Press the ENTER key to edit the highlighted item. Press the UP/DOWN keys again to change the setting. Press the ESC key to save the setting. Press the ESC key to cancel changes and returns to the previous menu.

NOTE:
For different countries, the grid standard needs to be set as different according to local requirements. If there is any doubt, please consult Canadian Solar service technicians for details.

7.5.3 Clear Energy
Clear Energy can reset the history yield of inverter

These two functions are applicable by maintenance personnel only. wrong operation will prevent the inverter from working properly.
7.5.4 Reset Password
This function is used to set the new password for menu "Advanced info." and "Advanced information" (see Figure 7.19).

![Figure 7.19 Set new password]

Enter the right password before set new password. Press the DOWN key to move the cursor, Press the UP key to revise the value. Press the ENTER key to execute the setting. Press the ESC key to return to the previous menu.

7.5.5 Power control
Active and reactive power can be set through power setting button.
There are 5 item for this sub menu:
4. Rea_P With Restore        5. Select PF Curve

This function is applicable by maintenance personnel only, wrong operation will prevent the inverter from reaching maximum power.

7.5.6 Calibrate Energy
Maintenance or replacement could clear or cause a different value of total energy. Use this function could allow user to revise the value of total energy to the same value as before. If the monitoring website is used the data will be synchronous with this setting automatically. (see Figure 7.20).

![Figure 7.20 Calibrate energy]

Press the DOWN key to move the cursor, Press the UP key to revise the value. Press the ENTER key to execute the setting. Press the ESC key to return to the previous menu.

7.5.7 Special Settings
This function is applicable by maintenance personnel only, wrong operation will prevent the inverter from reaching maximum power.

7.5.8 STD Mode settings
There are 5 setting under STD. Mode settings.
5. Initial Settings

This function is applicable by maintenance personnel only, wrong operation will prevent the inverter from reaching maximum power.

7.5.8.1 Enable logic interface settings
When select G98 or G99 standard to use the logic interface function, please follow below settings to enable the DRM. DRM default setting is "OFF", if DRM set "ON", but the logic interface un-connected to the switch or the switch is open, the inverter HMI will display "Limit by DRM" and the inverter output power will be limited to zero.
1. Select Initial Settings
2. Select DRM and set it "ON"

7.5.9 Restore Settings
There are 5 items in initial setting submenu.
Restore setting could set all item in 7.5.7 special setting to default.
The screen shows as below:

![Figure 7.21 Restore Settings]

Press the Enter key to save the setting after setting grid off, Press the ESC key to return to the previous mean,
7. Operation

7.5.10 HMI Update
This function is used for updating the LCD program.

This function is applicable by maintenance personnel only, wrong operation will prevent the inverter from reaching maximum power.

7.5.11 Internal EPM Set

NOTE:
To access to this area is for fully qualified and accredited technicians only. Please follow 7.4 to enter password to access this menu.

Select EPM Settings from the Main Menu to access the following options:

7.5.11.1 Mode Select
There are 3 settings in this menu as below:
1. OFF  2. Meter in Load  3. Meter in Grid

7.5.11.1.1 OFF
This function is used to shut down the Export Power Set.

Press the ENTER key to set done.
Press the ESC key to the previous menu.

7.5.11.2 Backflow Power
This submenu is used for set allowed power that inverter can generate to grid.

Press the UP/DOWN keys to set data.Press the ENTER key to set backflow power.
Then press DOWN keys to move the cursor, press UP to change the number.
Press the ESC key to save the settings and return to the previous menu.

7.5.11.3 Meter in Grid
The submenu is used to set meter in Load as shown as 5.3.7 Meter connection(optional).

Press the ENTER key to set done.
Press the ESC key to the previous menu.
7. Operation

7.5.11.3 Fail safe ON/OFF
This function is used to remind whether the EPM is ON or not. The default setting is ON.

Figure 7.27 Set the Fail Safe ON/OFF

Press the UP/DOWN keys to set ON/OFF. Press the ENTER key to set done.
Press the ESC key to the previous menu.

7.5.11.4 Backflow Work Mode
This submenu is used for set backflow work mode: 01, 02. 01 is the default mode.

Figure 7.28 Set the Backflow work mode

Mode 01 As shown in the figure 7.31, the average limiting mode, the output power of each phase is the average of the three-phase load power, and it is more than the phase of the lowest power in three phases.

Mode 02 As shown in the figure 7.32, the per phase limiting mode, the inverter only generate the power that equals to one of three-phase load power that is the lowest load power of a certain phase.

7.5.12 External EPM Set
This setting should only be turned on when Canadian Solar external EPM device is used. Two options are available: 5G-EPM and Others-EPM.

5G-EPM Failsafe Option should be turned ON when 5G series EPM device is used
Others-EPM Failsafe Option should be turned ON when 2G series EPM device is used
Only one option can be activated each time.

7.5.13 Restart HMI
The function is used for restart the HMI.

This function is applicable by maintenance personnel only, wrong operation will prevent the inverter from reaching maximum power.
7. Operation

7.5.14 Debug Parameter
This function is used for manufacturer maintenance personnel only.

7.5.15 DSP Update
The function is used for update the DSP.

This function is applicable by maintenance personnel only, wrong operation will prevent the inverter from reaching maximum power.

7.5.16 Compensation Set

This function is applicable by maintenance personnel only, wrong operation will prevent the inverter from reaching maximum power.

8. Maintenance

Canadian Solar Three Phase Inverter does not require any regular maintenance. However, cleaning the dust on heat-sink will help the inverter to dissipate the heat and increase its life time. The dust can be removed with a soft brush.

CAUTION:
Do not touch the inverter’s surface when it is operating. Some parts of the inverter may be hot and cause burns. Turn off the inverter (refer to Section 6.2) and wait for a cool-down period before before any maintenance or cleaning operation.

The LCD and the LED status indicator lights can be cleaned with a damp cloth if they are too dirty to be read.

NOTE:
Never use any solvents, abrasives or corrosive materials to clean the inverter.

8.1 Fan Maintenance

If the fan does not work properly, the inverter will not be cooled effectively and it may affect the effective operation of the inverter. Therefore, it is necessary to clean or replace a broken fan as follows:

1. Disconnect the AC power.
2. Turn the DC switch to "OFF" position.
3. Wait for 10 minutes at least.
4. Disconnect all electric connection.
5. Place the inverter on the platform.
6. Remove the 4 screws on the fan plate and pull out the fan assembly slowly.

7. Disconnect the fan connector carefully and take out the fan.
8. Clean or replace the fan. Assemble the fan on the rack.
9. Connect the electrical wire and reinstall the fan assembly.
10. Restart the inverter.

### Troubleshooting

The inverter is designed in accordance with the most important international grid-tied standards and safety and electromagnetic compatibility requirements. Before delivering to the customer, the inverter has been subjected to several tests to ensure its optimal operation and reliability.

In case of failure, the LCD screen will display an alarm message. In this case, the inverter may stop feeding into the grid. The failure descriptions and their corresponding alarm messages are listed in Table 9.1:

<table>
<thead>
<tr>
<th>Alarm Message</th>
<th>Failure description</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>No power</td>
<td>Inverter no power on LCD</td>
<td>1. Check PV input connections 2. Check DC input voltage (single phase &gt;120V, three phase &gt;350V) 3. Check if PV +/− is reversed</td>
</tr>
<tr>
<td>LCD show initializing all the time</td>
<td>Can not start-up</td>
<td>1. Check if the connector on main board or power board are fixed. 2. Check if the DSP connector to power board are fixed.</td>
</tr>
<tr>
<td>OV-G-V01/02/03/04</td>
<td>Over grid voltage</td>
<td>1. Resistant of AC cable is too high. Change bigger size grid cable 2. Adjust the protection limit if it’s allowed by electrical company.</td>
</tr>
<tr>
<td>UN-G-V01/02</td>
<td>Under grid voltage</td>
<td>1. Use user define function to adjust the protection limit if it’s allowed by electrical company.</td>
</tr>

<td>3. Please note that any damages due to wrong operations are not covered in the device warranty.</td>
</tr>
</tbody>
</table>

**NOTE:** If the inverter displays any alarm message as listed in Table 9.1; please turn off the inverter (refer to Section 5.2 to stop your inverter) and wait for 5 minutes before restarting it (refer to Section 5.1 to start your inverter). If the failure persists, please contact your local distributor or the service center. Please keep ready with you the following information before contacting us:

1. Serial number of Canadian Solar Three Phase Inverter;
2. The distributor/dealer of Canadian Solar Three Phase Inverter (if available);
3. Installation date;
4. The description of problem (i.e. the alarm message displayed on the LCD and the status of the LED status indicator lights. Other readings obtained from the Information submenu (refer to Section 6.2) will also be helpful.);
5. The PV array configuration (e.g. number of panels, capacity of panels, number of strings, etc.);
6. Your contact details.

**Specifications:**

- **Max. DC input power (Watts):** 14500
- **Max. DC input voltage (Volts):** 1000
- **Rated DC voltage (Volts):** 600
- **Start-up voltage (Volts):** 180
- **MPPT voltage range (Volts):** 160...850
- **Max. input current (Amps):** 22+22
- **Max short circuit input current (Amps):** 34.3+34.3
- **MPPT number/Max input strings number:** 2/4
- **Rated output power (Watts):** 12000
- **Max. output power (Watts):** 13200
- **Max. apparent output power (VA):** 13200
- **Rated grid voltage (Volts):** 3/11/200/380/415...520
- **Rated output current (Amps):** 17.3
- **Power Factor (at rated output power):** 0.8Leading–0.8Lagging
- **THDi (at rated output power):** <1.3%
- **Rated grid frequency (Hertz):** 50/60
- **Operating frequency range (Hertz):** 47...52 or 57...62
- **Max. efficiency:** 98.7%
- **EU efficiency:** 98.1%
- **MPPT efficiency:** >99.95%
- **Dimensions:** 310W*563H*219D (mm)
- **Weight:** 18.9kg
- **Topology:** Transformerless
- **Operating ambient temperature range:** - 25N ... 60N
- **Ingress protection:** IP65
- **Noise emission (typical):** <60 dBA
- **Cooling concept:** Intelligent redundant fan-cooling
- **Max. operation altitude:** 4000m
- **Designed lifetime:** >20 years
- **Grid connection standard:** EN500438, G83.2, G98, G99, A54777.2:2015, VDE0126-1-1, IEC61727, VDE N4105, C10/11
- **Operating surroundings humidity:** 0...100% Condensing
- **Connection:** Mc4 connector and Ip67 rated plug
- **Display:** LCD, 21 20 Z.
- **Communication connections:** 4 pins RS485 connector
- **Monitoring:** WiFi or GPRS
- **Warranty Terms:** 5 Years STD (Extendable to 20 Years)
