Compatibility statement between T4 and T6

To whom it may concern,

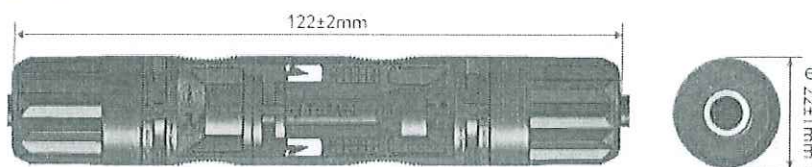

In order to further optimize the module designs to come, the diameter of the connector is required to be reduced. Therefore, we are pleased to inform you that the T4 connector will be replaced with the T6 connector under UL 1500V/ IEC 1000V/IEC 1500V requirements.

There is no difference in terms of the manufacturing process between these two connectors. The main physical differences are the diameter and length of the connector.

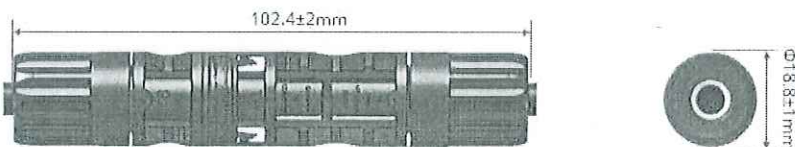

Tlian has performed all necessary tests to ensure this change does not alter in any way the electrical and mechanical performance of the connector. We further guarantee that these two connector versions are fully compatible and mate with each other as a certified connection.

The below picture shows the difference between the two versions.

Before: T4

After: T6

Remark:

Based on the previous T4 and T4-PPE-1, T4-PC-1 compatibility review, we can assure that the four connectors T4-PPE-1, T4-PC-1, T4 & T6 are compatible with one another.

Sincerely,

Changshu Tlian, LTD
